

# Extensible YANG Model for YANG-Push Notifications

I-D: draft-netana-netconf-notif-envelope-02

**A. Huang Feng**, INSA-Lyon  
P. Francois, INSA-Lyon  
T. Graf, Swisscom  
B. Claise, Huawei

February 10th 2024  
Interim NMOP - NETCONF WG

# Extensible YANG model for YANG-Push Notifications

Proposal of this I-D

- Structure defined as a notification containing
  - event-time
  - metadata(s)
  - notification-contents

```
structure envelope:
  +-- event-time          yang:date-and-time
  +-- hostname?          inet:host
  +-- sequence-number?   yang:counter32
  +-- notification-contents? <anydata>
```

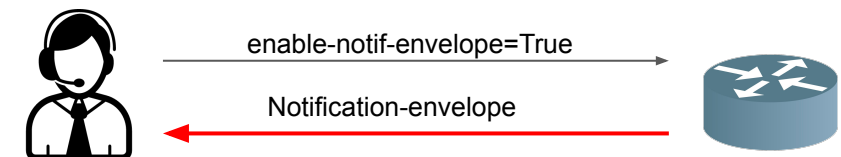

```
{
  "ietf-yp-notification:envelope": {
    "event-time": "2024-10-10T08:00:11.22Z",
    "notification-contents": {
      "ietf-yang-push:push-update": {
        "id": 1011,
        "datastore-contents": {
          "ietf-interfaces:interfaces": [
            {
              "interface": {
                "name": "eth0",
                "oper-status": "up"
              }
            }
          ]
        }
      }
    }
  }
}
```

## Configured Subscriptions

## Dynamic Subscriptions

# Extensible YANG model for YANG-Push Notifications

Proposal of this I-D

- YANG Notification structure for **YANG-Push Notifications** [RFC 8639/8641]
  - (1) Option to “opt-in” to this notification envelope
  - (2) Able to discover the capability of this new header through “ietf-notification-capabilities”
  - (3) Extensible header defined in YANG 1.1
  - (4) Definition of each encoding (XML, JSON, CBOR)
  - (5) Defines the first base extensions (I-D.tgraf-netconf-notif-sequencing; I-D.tgraf-netconf-yang-push-observation-time)

# Extensible YANG model for YANG-Push Notifications

Feedback IETF 121 Dublin

- Envelope header is configurable per subscription
  - Too complex, suggested to enable it globally [Reshad, Rob]
- Let's simplify, don't allow configuring "which headers" we want
  - Suggested to let the client discover what is supported [Joe]
- The envelope need to be a sx:structure [Rob]
- Plenty of support of this I-D
  - Multiple contributors agreed to implement this I-D

# Extensible YANG model for YANG-Push Notifications

## Changes since -00

- (1) Envelope is enabled and disabled globally via an RPC
- (2) Added Observation Timestamp extension [draft-tgraf-netconf-yang-push-observation-time]
- (3) Other changes
  - The XML namespace has been changed to “urn:ietf:params:xml:ns:yang:ietf-yp-notification”
  - Editorial changes
  - “The 'notification-contents' element SHOULD be located at the end of the notification envelope structure.”

# Extensible YANG model for YANG-Push Notifications

## Objectives of today's Interim meeting

- Confirm current draft direction
  - (1) Envelope is enabled and disabled globally via an RPC
    - Whether this approach is the best?
    - If not, which approach should we follow?
  - (2) Added Observation Timestamp extension [draft-tgraf-netconf-yang-push-observation-time]
    - Confirm interest on Observation Timestamp
    - Confirm current approach

# Extensible YANG model for YANG-Push Notifications

## (1) Enabling the envelope globally

- Global RPC “enable-notif-envelope”
  - This RPC is the only way to enabling/disabling the envelope
  - The node “/sn:subscriptions/enable-notification-envelope” becomes **read-only**
  - The enabling of the envelope MUST be configured **before** the creation of any dynamic subscriptions
    - If any subscriptions exist → “invalid-notification-envelope-config” error

```
module: ietf-yp-notification

augment /sn:subscriptions:
  +-ro enable-notification-envelope?  boolean
  +--ro metadata

rpcs:
  +---x enable-notif-envelope
    +---w input
      +---w enable-notification-envelope?  boolean
      +---w metadata
```

```
identity notif-envelope-error {
  description
    "Base identify for errors found while attempting to
    change configuration values during the
    'enable-notif-envelope' RPC requests.";
}

identity invalid-notification-envelope-config {
  base notif-envelope-error;
  description
    "This error is triggered and sent in the response of
    the RPC 'enable-notif-envelope' when attempting to change
    the value of the 'enable-notification-envelope' node
    while any Dynamic Subscription is active. The node
    'enable-notification-envelope' can only be changed prior to
    the creation of the Dynamic Subscription.";
}
```

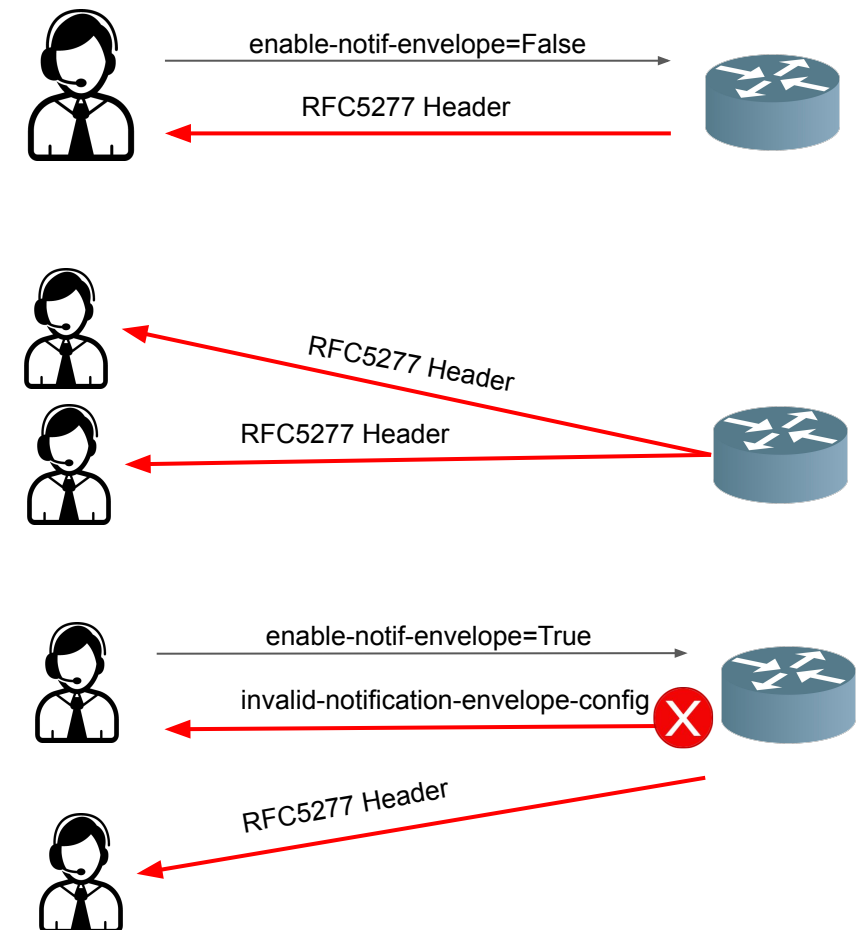

# Extensible YANG model for YANG-Push Notifications

## (1) Enabling the envelope globally

### Configured Subscriptions

### Dynamic Subscriptions

# Extensible YANG model for YANG-Push Notifications

## Discussion on change (1) Enabling the envelope globally

- Is this current approach appropriate?
- Request to raise a poll on February 10th interim to decide course of action. Which is the preferred option?
  - (1) Envelope is enabled and disabled globally with RPC call
  - (2) The node “/sn:subscriptions/enable-notification-envelope” becomes **writable** & **remove RPC**
  - (3) Revert back to notification-envelope configurable per subscription
- Operational concerns:
  - This RPC complexifies operations where network operators onboarding new nodes would need to explicitly enable the the envelope via the RPC, rather than use <edit-config> requests
  - Defaulting enable-notif-envelope=True eases this case
- Request to raise a second poll on February 10th interim to enable the envelope by default
  - (2) Defaulting enable-notif-envelope=True (notification-envelope enabled by default)

# Extensible YANG model for YANG-Push Notifications

## (2) Added Observation Timestamp extension

- Timestamp representing
  - The time the metrics were polled
  - The time the exported event occurred
- Extensions to YANG-Push
- Impact the following YANG-Push Notification only:
  - push-update
  - push-change-update
- Use same mechanism to get the support of this extension via “/sysc:system-capabilities/notc:subscription-capabilities”
- Based on: [draft-tgraf-netconf-yang-push-observation-time](#)

```
{
  "ietf-yp-notification:envelope": {
    "event-time": "2023-03-25T08:30:12.22Z",
    "hostname": "example-router",
    "sequence-number": 1,
    "notification-contents": {
      "ietf-yang-push:push-change-update": {
        "id": 2222,
        "ietf-yp-observation:timestamp": \
          "2023-03-25T08:30:11.22Z",
        "ietf-yp-observation:point-in-time": \
          "state-changed",
        "datastore-contents": {
          "yang-patch": {
            "patch-id": "patch_54",
            "comment": "Changing encoding to JSON and increasing \
              the period to 10 minutes",
            "edit": [
              {
                "edit-id": "id_change_1",
                "operation": "merge",
                "target": "/ietf-subscribed-notifications\subscriptions/subscription[id=2222]",
                "value": {
                  "ietf-subscribed-notifications:encoding": \
                    "ietf-subscribed-notifications:encode-json",
                  "ietf-yang-push:periodic": {
                    "period": 60000
                  }
                }
              }
            ]
          }
        }
      }
    }
  }
}
```

# Extensible YANG model for YANG-Push Notifications

Discussion on change (2) Adding Observation Timestamp extension

- Is this current approach appropriate?
- Request to raise a poll on February 10th interim and confirm wherever proposed changes reflect the will of the WG
  - (3) Observation timestamps added in the YANG-Push header

# Extensible YANG model for YANG-Push Notifications

## (3) Other minor changes

- The XML namespace has been changed to “urn:ietf:params:xml:ns:yang:ietf-yp-notification”
- Editorial changes, improve reading
- “The 'notification-contents' element SHOULD be located at the end of the notification envelope structure.”
  - Idea: *have the header located at the beginning of the message*

# Extensible YANG model for YANG-Push Notifications

## Discussion and open issues

- All the YANG notifications or only YANG-Push Notifications? So, far, current scope is fine (**YANG-Push**)
- Should this notification be defined as a “notification” or as a “sx:structure”? **sx:structure**
- XML namespace: which one to use?
  - urn:ietf:params:xml:ns:netconf:notification:2.0 → following RFC5277
  - **urn:ietf:params:xml:ns:yang:ietf-yp-notification** → following YANG guidelines
- Which notification and subscription extensions should be added?
  - Metadata sent by default when the envelope is enabled? **Yes, feedback IETF 121**
  - Hostname and Sequencing [draft-tgraf-netconf-notif-sequencing]; **Added**
  - Observation time? [draft-tgraf-netconf-yang-push-observation-time]; **Added**
  - Some of the extensions only impact a subset of YANG-Push notifications
    - How to deal with this? → **Current approach, extend YANG-Push header**

# Extensible YANG model for YANG-Push Notifications

## Discussion and open issues

- Thanks Qiufang, Andy, Pierre Francois, and Reshad for the feedback.
- We will integrate today's feedback on the next iteration
- Kent and Mahesh suggested at IETF 121 to initiate working group adoption call.
- Considering that this is the 7th document (including the preceding document) iteration, that 4 major implementations are under way and draft-wilton-netconf-yp-observability build on top of it, the authors request to initiate the **working group adoption before IETF 122**.

**BACKUP**

# YANG model for NETCONF Event Notifications

Interim 2024-09-19 – draft-ahuang-netconf-notif-yang

- <https://datatracker.ietf.org/doc/minutes-interim-2024-netconf-02-202409191300/>
- Thorough review of draft-ahuang-netconf-notif-yang/YANG-Push/NETCONF Event Notifications
- Conclusion
  - draft-ahuang-netconf-notif-yang fixes a **gap** for YANG-Push but might be worth putting the effort on a brand new header
  - We need:
    - Bypass RFC5277, thus use YANG-Push only
    - Extensible header
      - be able to add new metadata (sequencing, versioning, others...)
    - A client should be able to “opt-in”
      - Clients that don’t support this new header should continue working seamlessly
    - The notification should be a YANG-based solution
    - Fix JSON and CBOR underspecification
      - including CBOR-SID allocation

# YANG model for NETCONF Event Notifications

Problem statement - (draft-ahuang-netconf-notif-yang)

```
<notification xmlns="urn:ietf:params:xml:ns:netconf:notification:1.0">
  <eventTime>2022-09-02T10:59:55.32Z</eventTime>
  <push-update xmlns="urn:ietf:params:xml:ns:yang:ietf-yang-push">
    <id>101</id>
    <datastore-contents>
      <interfaces xmlns="urn:ietf:params:xml:ns:yang:ietf-interfaces">
        <interface>
          <name>eth0</name>
          <oper-status>up</oper-status>
        </interface>
      </interfaces>
    </datastore-contents>
  </push-update>
</notification>
```

```
{
  "ietf-notification:notification": {
    "eventTime": "2017-10-25T08:00:11.22Z",
    "ietf-yang-push:push-update": {
      "id": 1011,
      "datastore-contents": {
        "ietf-interfaces:interfaces": [
          "interface": {
            "name": "eth0",
            "oper-status": "up"
          }
        ]
      }
    }
  }
}
```

RFC 5277 - Netconf Event Notifications

RFC 8641 - YANG Push

YANG encodings:

- RFC 7950 - YANG XML
- RFC 7951 - YANG JSON
- RFC 9254 - YANG CBOR

Implementation Issues:

(1) YANG module not defined

(2) Non-existing Normative text defining this header

*Thanks Andy for confirming the approach was not correct.*

# Extensible YANG model for YANG-Push Notifications

## Proposal (comments)

- As requested
  - Scoped to YANG-Push (both dynamic and configured subscriptions)
    - Can be implemented with NETCONF and RESTCONF
  - Use a “notification” statement rather than a “sx:structure”
  - Given that it’s intended for YANG-Push, the following notifications are impacted:
    - push-update; push-change-update
    - subscription-started; subscription-modified; subscription-terminated
    - subscription-suspended; subscription-resumed; subscription-completed
    - replay-completed

# Extensible YANG model for YANG-Push Notifications

## (1) Option to “opt-in” through a YANG-Push Subscription

- Configuration on Globally on the server via the RPC “enable-notif-envelope”

```
rpcs:
  +---x enable-notif-envelope
    +---w input
      +---w enable-notification-envelope?  boolean
      +---w metadata
```

Currently  
Default=False

enable-notification-envelope=false

Old Header as RFC5277

Collector

enable-notification-envelope=true

New envelope Header

Collector

# Extensible YANG model for YANG-Push Notifications

(2) Able to discover the capability of this new header

- Augmentation on notification capabilities (RFC9196)

module: ietf-yp-notification

```
augment /sn:subscriptions:
  +--ro enable-notification-envelope?  boolean
  +--ro metadata
augment /sysc:system-capabilities/notc:subscription-capabilities:
  +--ro notification-metadata
  +--ro notification-envelope?  boolean
  +--ro metadata
  +--ro hostname-sequence-number?  boolean
```

module: ietf-yp-observation

```
augment /yp:push-update:
  +--ro timestamp?      yang:date-and-time
  +--ro point-in-time?  enumeration
augment /yp:push-change-update:
  +--ro timestamp?      yang:date-and-time
  +--ro point-in-time?  enumeration
augment /sysc:system-capabilities/notc:subscription-capabilities:
  +--ro yang-push-observation-supported?
    inotifseq:notification-support
    {yang-push-observation-timestamp}?
```

# Extensible YANG model for YANG-Push Notifications

## (3) Extensible header defined in YANG

- Structure defined as a notification containing
  - event-time
  - metadata(s)
  - notification-contents

```
structure envelope:  
  +-- event-time          yang:date-and-time  
  +-- hostname?           inet:host  
  +-- sequence-number?    yang:counter32  
  +-- notification-contents? <anydata>
```

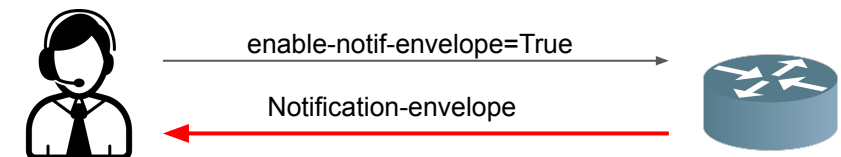

```
{  
  "ietf-yp-notification:envelope": {  
    "event-time": "2024-10-10T08:00:11.22Z",  
    "notification-contents": {  
      "ietf-yang-push:push-update": {  
        "id": 1011,  
        "datastore-contents": {  
          "ietf-interfaces:interfaces": [  
            {  
              "interface": {  
                "name": "eth0",  
                "oper-status": "up"  
              }  
            }  
          ]  
        }  
      }  
    }  
  }  
}
```

JSON example without metadata

### Configured Subscriptions

### Dynamic Subscriptions

# Extensible YANG model for YANG-Push Notifications

## (4) Definition of each encoding (XML, JSON, CBOR)

- Explicit definition of the content of the “envelope” (**solving gap for JSON and CBOR**)
  - Definition of the namespace (urn:ietf:params:xml:ns:netconf:notification:2.0)
  - Mandatory event-time node
  - Mandatory notification-contents node
  - Metadata present when configured

A YANG notification encoded in XML is structured as a root "envelope" container. The namespace of this container is the namespace defined in the YANG module "ietf-yp-notification":

```
urn:ietf:params:xml:ns:netconf:notification:2.0
```

Two mandatory child nodes within the "envelope" container are expected, representing the event time and the notification payload. The "event-time" node is defined within the same XML namespace as the "envelope" container. The "event-time" node MUST be compliant with [\[RFC3339\]](#). Other metadata defined within the YANG module defined in [Section 5](#) MUST use the same XML namespace. See [Section 3.4](#) for more details.

# Extensible YANG model for YANG-Push Notifications

## (5) Extensions for hostname and sequence-number

- Definition of hostname and sequence-number extensions (draft-tgraf-netconf-notif-sequencing)
  - **Present** by default when the envelope is enabled
  - Discovery of support of this header through RFC9196

```
structure envelope:
  +-- event-time          yang:date-and-time
  +-- hostname?           inet:host
  +-- sequence-number?    yang:counter32
  +-- notification-contents? <anydata>
```

```
{
  "ietf-yp-notification:envelope": {
    "event-time": "2023-03-25T08:30:11.22Z",
    "hostname": "example-router",
    "sequence-number": 1,
    "notification-contents": {
      "ietf-yang-push:push-update": {
        "id": 6666,
        "datastore-contents": {
          "ietf-interfaces:interfaces": [
            {
              "interface": {
                "name": "eth0",
                "type": "iana-if-type:ethernetCsmacd",
                "oper-status": "up",
                "mtu": 1500
              }
            }
          ]
        }
      }
    }
  }
}
```
