

Validate Configured Subscription YANG-Push Publisher Implementations NETCONF & NMOP WG

IETF 121
November 2-3rd, 2024
Hackathon

Hackathon – Plan and Software

Test Plan

- Validate work in progress vendor YANG-Push publisher implementations.
- Configure RFC 8641 compliant YANG-Push configured subscription.
- Verify output in packet capture before YANG-Push receiver and after transformation.

Development Plan

- MVP 1 – Basic Requirements (9)
- MVP 2 – Scale and Secure (3)
- MVP 3 – Optimizations (2)

Software

- YANG-Push Publisher - Cisco IOS XR
- YANG-Push Publisher - 6WIND VSR
- YANG-Push Publisher - Huawei VRP
- YANG-Push Receiver – Pmacct
- YANG-Push Receiver – Netgauze
- udp-notif dissector - Wireshark

Hackathon – Repository

Test Repository

- <https://github.com/network-analytics/ietf-network-analytics-document-status/tree/main/121/Hackathon>
- Contains
 - ❑ Packet capture on the wire
 - ❑ Netconf RPCs and YANG-Push JSON messages
 - ❑ Python script which performed test cases

The screenshot shows the GitHub repository page for `network-analytics / ietf-network-analytics-document-status`. The left sidebar displays the file tree with the `Hackathon` directory selected. The main content area shows the commit history for the `Hackathon` directory, listing files and their corresponding commit messages.

draft-netana-netconf-yp-transport-capabilities				

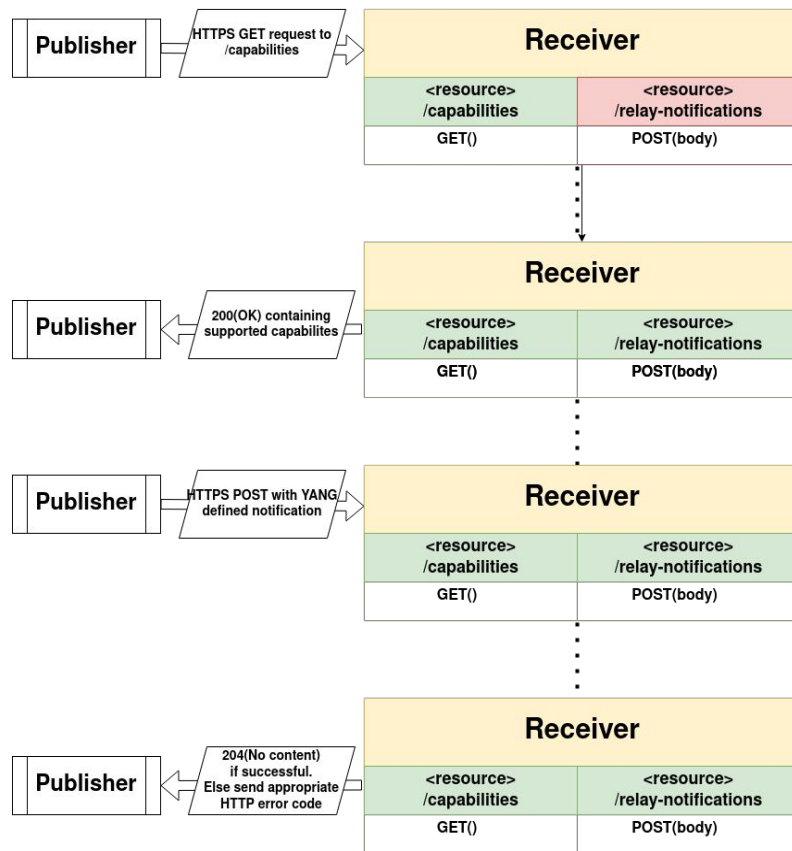

Green marked describes new capability at IETF 121. "P" to partially implemented

Implementation of An HTTPS-based Transport for YANG Notifications

draft-ietf-netconf-https-notif-15

- A protocol for **sending asynchronous event notifications** similar to notifications defined in **NETCONF Event Notifications** [RFC5277], but over **HTTPS**.
- Interactions will occur between a publisher which must be a "server" (e.g., a NETCONF or RESTCONF server) and a **receiver** (which **need not** be a NETCONF or RESTCONF server).
- **Extended Implementation in C [*]** : [github link](#)
- **Python Implementation** : [github link](#)
 - Flask : **synchronous** event handler (WSGI)
 - Fast API : **asynchronous** event handler (ASGI)
- Can be made multithreaded using Gunicorn
- Added **validation** for capability data at collector and relay notification from publisher either by integrating with **sysrepo** as a object datastore or using **libyang** for validation
- Added dynamic **response handling** based on request covering **edge cases**
- Team : Siddharth Bhat, Vartika T R, Hayyan A, Bharadwaja Meherrushi Ch, Prof Mohit P T ;Draft authors : Mahesh Jethanandani, Kent Watsen

* Purple marked describes extended implementation originally implemented by **Alex Huang Feng**.

* green marked describes implementation from scratch
